

Problem:

You need to encrypt and decrypt a message with a password.

Solution:

```
#encrypt  
echo secret | openssl aes-256-cbc -pbkdf2 -a -salt -pass pass:test
```

```
#decrypt  
echo encString | openssl aes-256-cbc -pbkdf2 -d -a -pass pass:test
```

**secret** is the message to encrypt and **test** is the password.
