

Components:

apple macos -
microsoft windows -
linux linux kernel -
adobe flash player *

Description:

A use-after-free vulnerability was discovered in Adobe Flash Player before 28.0.0.161. This vulnerability occurs due to a dangling pointer in the Primetime SDK related to media player handling of listener objects. A successful attack can lead to arbitrary code execution. This was exploited in the wild in January and February 2018.

Main problems:

416 no CWE Description available
