

## Components:

cmsmadesimple cms made simple 2.2.19

cmsmadesimple cms made simple 2.2.21

## Description:

A remote code execution vulnerability has been identified in the User Defined Tags module of CMS Made Simple version 2.2.19 / 2.2.21. This vulnerability arises from inadequate sanitization of user-supplied input in the 'Code' section of the module. As a result, authenticated users with administrative privileges can inject and execute arbitrary PHP code.

## Main problems:

94 "Improper Control of Generation of Code ('Code Injection')"
