

Problem:

Do you want to **start an Nmap scan with known vulnerabilities?**

Solution:

Use `nmap --script vuln 192.168.178.1 -oN log.log --reason` command.

`--script vuln` - use Nmap vulnerabilities script for scan

`192.168.178.1` - IP for scan

`-oN log.log` - save output in logfile

`--reason` - reason for port status
