

Problem:

You are tired and have to continue the pentest, you need an overview in a folder.

Use **ls**

Solution:

Normally you can use the **ls** to list folder content.

But if you use also options like **-l**, **-a**, **-h**, **-t**, **-s**, **-S**, **-r**,

ls -l - output as list

ls -la - output as list and all also hided files/folders

ls -lah - user human output for sizes, also KB,MB...

ls -laht - sort by date

ls -lahtr - sort by date, **-r** is for reverse sort

ls -lahS - sort by size
