

Problem:

You need linux kernel information ?

Solution:

Use command `uname -a`

Example output:

```
Linux server 6.1.21-v7+ #1642 SMP Mon Apr 3 17:20:52 BST 2023 armv7l  
GNU/Linux
```

```
hostname: server
```

```
Build date: Mon Apr 3 17:20:52 BST 2023
```

```
Architecture: armv7l
```
