

Problem:

Do you need **remote view** on Linux systems??

Solution:

Following steps:

1. (remote) enable port in iptables -> `iptables -A INPUT -p tcp --dport 5900 -j ACCEPT`
2. (remote) start vncserver -> `x11vnc -forever -usepw -display :0 &`
3. (local) connect -> `vncviewer remote_ip:0` or on MacOS open `vnc://remote`
