Components: givewp givewp *

Description:

The Donations Widget plugin for WordPress is vulnerable to PHP Object
Injection in all versions up to, and including, 3.19.4 via
deserialization of untrusted input from the Donation Form
through the 'card_address' parameter. This makes it possible
for unauthenticated attackers to inject a PHP Object. The
additional presence of a POP chain allows attackers to achieve
remote code execution.

Main problems:

502 "Deserialization of Untrusted Data"
