CVE-2024-42599 - Score: 8.8

Components:

seacms seacms 13.0

Description:

SeaCMS 13.0 has a remote code execution vulnerability. The reason for this vulnerability is that although admin_files.php imposes restrictions on edited files, attackers can still bypass these restrictions and write code, allowing authenticated attackers to exploit the vulnerability to execute arbitrary commands and gain system privileges.

Main problems:

94 "Improper Control of Generation of Code ('Code Injection')"
