CVE-2024-46640 - Score: 9.8

Components:

seacms seacms 13.2

Description:

SeaCMS 13.2 has a remote code execution vulnerability located in the file sql.class.chp. Although the system has a check function, the check function is not executed during execution, allowing remote code execution by writing to the file through the MySQL slow query method.

Main problems:

94 "Improper Control of Generation of Code ('Code Injection')"
