CVE-2023-4504 - Score: 7.0

Components:

    openprinting cups *
    openprinting libppd 2.0

Description:

Due to failure in validating the length provided by an attacker-crafted PPD PostScript document, CUPS and libppd are susceptible to a heap-based buffer overflow and possibly code execution. This issue has been fixed in CUPS version 2.4.7, released in September of 2023.
