Problem:

During pentest you have a keyboard and see on the screeen

```
user@hostname: $
root@system: $ or
#: $
```
What do you do next?

Solution:

htop or **top** – list system processes and their resources

iotop – list I/O usage by processes

iftop – list network usage by processes

ss -tulnp or **netstat -tulnp** – list network connections

dmesg – list last kernel log
