CVE-2021-44967 - Score: 8.8

Components:

limesurvey limesurvey 5.2.4

Description:

A Remote Code Execution (RCE) vulnerabilty exists in LimeSurvey 5.2.4 via the upload and install plugins function, which could let a remote malicious user upload an arbitrary PHP code file. NOTE: the Supplier's position is that plugins intentionally can contain arbitrary PHP code, and can only be installed by a superadmin, and therefore the security model is not violated by this finding.

Main problems:

434 "Unrestricted Upload of File with Dangerous Type"
