CVE-2023-35949 - Score: 7.8

Components:

libigl libigl 2.5.0
libigl libigl 2.4.0

Description:

Multiple stack-based buffer overflow vulnerabilities exist in the readOFF.cpp functionality of libigl v2.4.0. A specially-crafted .off file can lead to a buffer overflow. An attacker can arbitrary code execution to trigger these vulnerabilities.This vulnerability exists within the code responsible for parsing geometric faces of an OFF file.

Main problems:

121 no CWE Description available
