CVE-2018-4878 - Score: 9.8

Components:

    apple macos -
    microsoft windows -
    linux linux kernel -
    adobe flash player *

Description:

A use-after-free vulnerability was discovered in Adobe Flash Player
    before 28.0.0.161. This vulnerability occurs due to a dangling
    pointer in the Primetime SDK related to media player handling of
    listener objects. A successful attack can lead to arbitrary
    code execution. This was exploited in the wild in January and
    February 2018.

Main problems:

    416 no CWE Description available
