CVE-2024-0148 - Score: 7.6

Components:

Description:

NVIDIA Jetson Linux and IGX OS image contains a vulnerability in the UEFI firmware RCM boot mode, where an unprivileged attacker with physical access to the device could load untrusted code. A successful exploit might lead to code execution, escalation of privileges, data tampering, denial of service, and information disclosure. The scope of the impacts can extend to other components.

Main problems:
